### **EXAMINER'S AMENDMENT**

Authorization for this examiner's amendment was given in a telephone interview with Ray Coppiellie on 12/13/04.

The application has been amended as follows:

In claim 6, line 5, "having" has been deleted.

#### ***Oath/Declaration***

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

It does not identify the foreign application for patent or inventor's certificate on which priority is claimed pursuant to 37 CFR 1.55, and any foreign application having a filing date before that of the application on which priority is claimed, by specifying the application number, country, day, month and year of its filing.

2. The foreign application cited has the correct filing date but the wrong application number as it cites the application number of the PCT rather than that of the parent foreign application. The PCT is also not referenced in the declaration.

3. Applicant is now required to submit a substitute declaration or oath to correct the deficiencies set forth above. The substitute oath or declaration must be filed within the THREE MONTH shortened statutory period set for reply in the "Notice of Allowability" (PTO-37). Extensions of time may NOT be obtained under the provisions of 37 CFR 1.136. Failure to timely file the substitute declaration (or oath) will result in

**ABANDONMENT** of the application. The transmittal letter accompanying the declaration (or oath) should indicate the date of the "Notice of Allowance" (PTOL-85) and the application number in the upper right hand corner.

#### ***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or fairly suggest a method of making a veneer faced panel wherein a blank is placed in a first press, the interaction of the press components forms at least two parallel flat ends by cutting the blank, the blank is moved to a second press, the second press having flat peripheral regions on the lower tool of the press against which the cut flat regions of the blank rest with the peripheral regions extending beyond the edges of the blank, applying a veneer sheet to the blank which overlaps at least the two cut edges, and pressing the veneer against the blank to shape it and bond it to the blank while cutting the veneer so the veneer has flat edges faces adjacent and coplanar with the cut flat edges of the blank. While Kamrass(U.S. Patent 2,482,981) suggests cutting a first sheet during pressing, applying a second sheet to the first and cutting it during pressing, the pressing occurs in the same press, and it would not have been obvious to use two presses since the materials used are flexible. Additionally, the mold does not have flat peripheral regions on which the cut regions can rest. While Prance et al.(U.S. Patent 2,466,966) discloses two presses, one used to press one blank, and the second used to press a second layer onto the first, there is no suggestion in the reference that the molds have any cutting attachments or that any cutting or trimming

occurs is combination with the molds. Rather it suggests that blanks are pre-cut.(Col. 7, II. 72-74)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Information Disclosure Statement***

As a PTO 1449 has not been found for the foreign references found in the application, they have been added to the PTO 892.
